Agricultural communities are being affected by climate change. Droughts, heat waves, cold snaps, and flooding are all regarded as severe threats to crop production as they hinder plant growth and development, resulting in yield losses. Plants respond to stress through a complex process that includes changes in physiological and biochemical processes, gene expression, and alterations in the amounts of metabolites and proteins at different developmental stages. This special issue will focus on recent advances in the use of various traditional and modern biotechnological strategies to understand stress adaptation and tolerance mechanisms, including but not limited to genomics, transcriptomics, metabolomics, proteomics, miRNA, genome editing, transgenic plants, exogenous application of plant growth regulators, and so on. Abiotic stress is a key constraint to agricultural production around the world. Water deficit, excess precipitation, high and low temperature, and salinity are the most prevalent abiotic stresses. Compaction, mineral availability, and pH-related stressors are among the others. This research topic aims to highlight the most recent breakthroughs in plant responses to abiotic stresses and adaptation/tolerance strategies. This special issue provides the advanced toolkit and technologies that are used to investigate and understand plant responses to abiotic stress. The purpose of this special issue is to give a platform for scientists and academics from across the world to promote, share, and discuss new concerns and advancements in the field of abiotic stress in plants. Current updates and recent developments in the physiological, molecular, and genetic perspectives on combined and sequential stress responses and tolerance in field crops are expected in articles. Original research and review articles dealing with abiotic stress are welcomed in this special issue. Potential topics include but are not limited to: physiological, biochemical, and molecular responses of plants under abiotic stress; systems biology approaches to study abiotic stress in crop plants; phenotyping for abiotic stress tolerance in crops; physiological and molecular characterization of crop tolerance to abiotic stresses; molecular breeding for developing and improving abiotic stress resilience in crops; microbial mitigation of abiotic stress responses in crops; omics technologies for abiotic stress tolerance in plants; performance of novel GMO crops under abiotic stress conditions; CRISPR/Cas genome editing tools for the improvement of abiotic stress tolerance in plants; crop production in abiotic stress conditions.
